NBP Performance at a Glance

Editor's Corner

Dear Readers,

Commercial banks operating in Pakistan have been under criticism in the recent past on account of widening interest spread. Depositors feel that they are being denied their due share from the huge profits that the banks have earned in the recent past. Banks, however, are of the viewpoint that they are offering market related returns on time deposits, better services, diversified products to their clients and very low service charges relative to banks internationally. It is primarily the preponderance of zero or low yield current and saving deposits which has been responsible for the low return on all deposits. The combined share of such deposits is around 68 percent of the total deposits. Banks feel that depositors have the choice to keep their deposits in any of the long term schemes which offer better returns, but for cultural and convenience reasons do not generally want to make a switch.

The financial system of any country, is an undeniable determinant of its economic growth, as it provides an efficient channel that routes funds from surplus sectors in the economy towards deficit ones. Bank spreads, defined as the difference between the lending and deposit interest rates, cannot be sustained over a longer period since ultimately, to sustain their core business i.e. lending, banks will have to come up with schemes to build up their deposit base which invariably would mean higher rates.

Literature has shown that the factors contributing to the bank spread, include among others, the operational efficiency, the regulatory environment, the degree of banking competition, the degree of risk, the market structure and the macroeconomic environment among others.

Domestically, we see that the financial sector reforms have changed the sector's outlook. Significant structural changes have taken place in the industry, which has changed the nature of banks' lending and deposit taking activities. There has been a shift in terms of both, outreach and diversification of banking services. New products have been introduced by the banks and now there is greater competition, which has enabled customers to avail banking services at more competitive rates. Customers have high expectations and many alternatives from which to choose.

Banks are no longer making significant provisioning against non-performing loans or facing an unfavourable tax structure which used to increase the operating expenses and consequently banks had to raise the spread to remain profitable. Recent years have seen an improvement in the asset quality and profitability of the banks.

It is significant to note that in the year 1999 for example, the aggregate costs of carrying NPL (4.75%) and the intermediation cost (4.5%) was 9.25%. This, because of efficiencies created and NPLs reduced, is currently 4.75%.

The State Bank's second quarterly report for 2005-06 states, 'the dynamics of banking spread has also changed and therefore, the rising spread may not necessarily be depicting the operating inefficiencies in the sector, rather it may be reflecting the shift in the structure of deposits and advances portfolio.

The maturity profile of deposits as mentioned above is largely made up of shorter tenure current and saving deposits. The structure of loan portfolio has witnessed significant changes in terms of clientele and the nature of loans. Banks have been lending to new sectors, like consumer loans and small & medium enterprises, and as these are relatively riskier in nature the yield on such advances are higher. At end December 2005, 50.9 percent of the total bank deposits were placed at rate between 0 to 1 percent followed by 27.8 percent deposits placed at the rate between 1 to 4 percent. On the other hand, 44.5 percent of total bank advances were placed at the rate between 9 to 12 percent. This distribution of returns against deposits and advances is itself an indication of higher spread.

While banks' profitability has significantly enhanced, in the changed banking scenario, banks have to customize their operations to remain competitive, especially in the light of the growth expected in the mutual fund industry. There is increased competition for market share, due to expanding business activities of the private banks, strict regulatory requirements, increased minimum paid up capital requirements, implementation of Basel II, modernisation of core systems, increased automation and upgradation of IT, new products — all have a significant impact on banks' resources. All these requirements place pressures on banks' resources, as they have to be catered for the success of the 21st century bank.

Depositors could earn better returns if they diversify their deposits from current/savings into term deposits of various maturities. One feels that banks too have realized that they have to share more of their earnings with the depositors. This is evident by the figures quoted by the State Bank "Quarterly Performance Review of the Banking System, March 2006".

It is evident by an increase of 145 bps in the weighted average deposit rates since CY04. During the quarter Jan-Mar '06, these rates increased by another 20 bps. The rising rates have also had positive impact on the share of fixed deposits, which increased to 27 percent, from 18 percent in CY04 and 26 percent in CY05. The rates are expected to increase further given the growing liquidity strains, and the resultant stiff competition for funds. This would help further increase the share of fixed deposits in the total deposits of the banking system.

This is an encouraging development for the depositors who have long been demanding for better returns. With banks facing increased pressures on their earnings as they adapt to the changing banking scenario, any improvement in returns that they can accommodate would be welcome by the depositors.

Ayesha Mahm

Banking Sector Performance - The Year 2005

Banking Sector Performance is an annual feature of our Bulletin, based on data from the Annual Accounts of the banks. This paper covers their performance for the year 2005. The banks have been grouped into three different categories - major banks, private and the two provincial banks, and the foreign banks operating in Pakistan. The performance of these banks has been evaluated by studying the different financial indicators.

During the last decade, the banking sector has gone through a number of changes. The reforms have been implemented in the context of a broader macroeconomic stabilization and structural agenda, providing an essential foundation to financial sector recovery. A major achievement of the reform process has been the transformation of a predominantly state owned and weak banking sector into a healthier, market based system, owned primarily by the private sector. This has been facilitated by the restructuring of major banks, ongoing consolidation of the sector, strengthening of regulatory capacity, and improvements in transparency, corporate governance and credit culture.

During the year, some major developments/ changes were witnessed in the banking sector; Prudential Regulations were developed for agricultural financing, amendments were made to the Prudential Regulations for Corporate and Commercial Banking and SME financing. To strengthen the solvency of individual banks/DFIs, the State Bank raised the minimum paid up capital as well as Capital Adequacy Ratio based on Risk Weighted Assets. The existing minimum paid up capital requirement for locally incorporated banks/DFIs has been raised to Rs6 billion to be achieved in a phased manner by 2009.

The branches of foreign banks operating in Pakistan are also required to increase their assigned capital to Rs6 billion, within the timelines prescribed for the locally incorporated banks/DFIs. However, those branches of foreign banks whose head office holds a minimum paid

up capital of US\$100 million and have a CAR of 9 percent can be allowed to continue to maintain the minimum assigned capital of Rs2 billion.

The State Bank of Pakistan has been emphasising upon banks to adopt Basel II. Banks are operating in an environment where there is intense competition, significant losses and strict regulatory requirements, which has made it essential for them to evaluate their risk management practices. Adoption of Basel II by banks would result in a better understanding of credit risk management. Compliance with the Basel II Accord requires financial institutions to identify, generate, track and report on risk related data.

State Bank has given the commercial banks a time frame for adoption of the different approaches towards implementing Basel II. Now each bank is required to formulate its internal plans specifying the approach they are willing to adopt and the plans for moving to the particular approach.

Last year, the State Bank of Pakistan asked all commercial banks to introduce Basic Banking Accounts facility, so providing basic banking convenience to the low income segments of society. Such accounts have low minimum initial deposit (Rs1000), no limit on minimum balance, no fee for maintaining this account, maximum two deposit transactions and two chequing withdrawals allowed free of charge per month, unlimited free of charge ATM withdrawals, are some of the main features.

An improved macroeconomic environment domestically has supported the financial sector reform process. As investors confidence in the economy has strengthened, demand for credit by the private sector has grown. Corporate and consumer sectors remained the major beneficiaries of the growth in loans. While interest rates had started to rise early in the year to contain inflationary pressures, it did not significantly dampen the market's appetite for credit. Banks' enhanced and diversified their lending portfolios taking advantage of the improving mark up rates.

adopt Basel II

Amendments in PR, paid up capita

4

Banks perform During the year 2005, the commercial banks operating in Pakistan, both local and foreign have performed well. There has been an exceptional growth in profitability, higher lending supported by growth in the deposit base, significant investment in infrastructure, and human resources, substantially improved capital adequacy ratios, better risk management practices, adoption of good corporate governance and accountability being vigorously enforced by the State Bank of Pakistan.

A review of the key performance indicators shows that in terms of profitability, 2005 proved to be an exceptional year for the banking industry. Increased business activities, especially branching into consumer financing, tightening of monetary policy by the State Bank of Pakistan to curb inflationary pressures, led to a gradual rise in benchmark rates during the year. Improved interest margins, accompanied by continued credit growth to the private sector, and an increase in the nonmark up revenues were factors responsible for the enhanced profitability of the banking sector.

Major banks' cumulative profits (*BT*) jumped by Rs31.5 billion to Rs60.2 billion, more than double the figure of the preceding year. National Bank of Pakistan (NBP) recorded the highest profit at Rs19.1 billion, while MCB showed a significant jump of Rs9 billion to reach Rs13 billion. Habib Bank Ltd (HBL) recorded a pre-tax profit of Rs13.8 billion, while ABL showed a phenomenal rise of more than eight times.

The cumulative profit (*BT*) of private banks grew by Rs7.6 billion in absolute terms or by 47.3 percent in 2005 to Rs23.6 billion. This was mainly attributable to enhanced profits accruing from Faysal Bank (Rs3.96 billion), Union Bank (Rs2.7 billion), Bank of Punjab (Rs3.2 billion), Bank Al-Falah (Rs2.56 billion) and Bank Al-Habib (Rs2.02 billion). KASB Bank and Crescent Commercial recorded losses, the later for the second consecutive year. Saudi Pak showed a substantial decline of 71.8 percent in their profits to Rs140 million.

In the foreign banks category, three banks were responsible for the Rs4.3 billion rise in group's profits. Standard Chartered's profits rose by 57 percent to Rs5.4 billion in 2005, Citibank's grew by 48.6 percent to Rs2.6 billion, followed by ABN Amro, whose profits jumped by 91 percent to Rs2.2 billion.

Some banks

RoA and

In this category, Deutsche Bank recorded the highest loss of Rs126 million. Against a profit of Rs15 million in 2004, American Express recorded a loss of Rs27 million last year, while Oman International has recorded a loss for two consecutive years. All these banks have high cost income ratios.

Profitability as measured by RoA and RoE

has improved considerably for the vast majority of banks. The accompanying tables give a detailed picture for all banks. There has been a substantial increase in RoE for the large banks. A mixed picture emerges for the private banks. In this category, there are banks like Crescent Bank and KASB which have shown a negative RoE. Similarly, in the foreign banks category, while ABN Amro, Standard Chartered and Citibank have recorded increases, American Express, Oman International and Rupali Bank show negative RoE. RoA shows comparative efficiency of banks in asset management and is an important indicator of profitability. In 2005, RoA of large banks shows further improvement, while the ratio has not shown much change for the

private and foreign banks.

m 15

The following Table shows that 17 banks, comprising of the 5 major, 3 foreign and 9 private banks have a 90 percent share in the assets and deposits of the banking sector, while a higher 98 percent share in the profits. NBP has the distinction of being on the top with respect to all three indicators. HBL is placed 2nd for the three indicators - assets, deposits and profit. After privatisation, UBL and ABL are showing good performance and there has been a complete turnaround as seen by the profits declared by these two banks. UBL closely follows HBL, but in terms of profits it has been overtaken by MCB Bank. Standard Chartered's profits exceed those of all private banks.

Note: Above banks account for 90% of total banks assets, 91% of banks total deposits and 98% of all banks PBT

Amongst the private banks, Faysal Bank has done well in terms of profits, while Askari Bank has enhanced its assets and deposits, so has Bank Al-Falah and Union Bank. Their net interest income has shown a substantial rise.

Given the excess liquidity with the banks, they have aggressively increased their advances portfolio. With rising interest rates, especially in new riskier areas of financing, the income of banks has gone up substantially. Substantial growth in advances and increasing net interest income of the banks have been a major source of growth in pre-tax profit, while reduced tax rates helped banks to increase their after tax profits.

HBL continues to be the biggest lender, disbursing nearly Rs317 billion, or 16.4 percent of all bank advances. It was followed by NBP, which lent nearly 14 percent. ABL registered the highest growth (85 percent) amongst the large banks, alongwith substantial credit expansion by UBL (44.0 percent) and MCB (31.3 percent).

Amongst the private banks, Bank of Punjab lent aggressively, with its lending rising by 61.4 percent, Faysal Bank also maintained the increasing trend, so did Bank Al-Falah, Askari Commercial etc. In this category, Saudi Pak and Crescent Commercial saw a decline in their lending.

In the foreign banks category, while the bulk of advances was extended by Standard Chartered, it was Citibank which saw an increase of nearly 19 percent in its advances.

Net interest income grows Correspondingly net interest income has risen quite sharply for the larger banks like NBP, HBL, UBL and MCB and also for Bank Al-Falah, Bank of Punjab, Union Bank, Faysal Bank, Standard Chartered, Citibank and ABN Amro.

low returns to the depositors, figures for 2005 reveal that the deposit base has grown by 18 percent, with substantial increases being recorded by the private banks. Major banks make up for half of the total deposits, with NBP leading, closely followed by HBL. In this category of banks, UBL has shown the fastest

growth in deposits.

Though banks are being criticised for offering

In the private banks category, deposits of Bank Al-Falah rose by 71.4 percent, of Askari Commercial by 42.7 percent and of Union Bank by 44.8 percent. Standard Chartered has the largest deposit base in the foreign banks category (Rs83.6 billion), while Bank of Tokyo has shown the fastest rise in its deposits, growing by 157.8 percent, followed by Habib Bank AG Zurich (19 percent), Citibank (12.8 percent). Deposits of ABN Amro, Deutsche Bank have fallen.

Net Interest income has shown a substantial jump in 2005 for all categories of banks. For the five major banks this rose by Rs38.1 billion, with HBL accounting for Rs11.3 billion of this increase, NBP Rs8.9 billion, MCB Rs8 billion, UBL Rs6.6 billion and ABL Rs3.3 billion. For the private banks cumulatively, the increase was to the tune of Rs12.76 billion, and for foreign banks it was Rs5.1 billion.

Per branch statistics show that deposits have remained more or less at previous year's level, while advances per branch has risen for all banks. Lending by all major banks have risen between 25 - 46 percent. Citibank and ABN Amro have large advances per branch, so does Faysal Bank, Union Bank.

Deposit grow

July - August 2006

ECONOMIC BULLETIN

Profit per branch is the highest for NBP in case of major banks, while it is Faysal Bank, Union Bank, Metropolitan Bank and Meezan Bank in the private banks category, Citibank, ABN

Amro and Bank of Tokyo have high profits per branch. The accompaying tables gives details of other ratios for each bank.

Mergers/Change of Name

- Arif Habib Rupali Bank Limited declared a scheduled bank w.e.f. August 5, 2006. Rupali Bank operations were amalgamated with and into Arif Habib Rupali Bank Limited.
- Name of Dawood Bank Limited has been changed to Atlas Bank Limited w.e.f March 6, 2006.
- Name of The Bank of Tokyo Mitsubishi Limited has been changed to The Bank of Tokyo – Mitsubishi UFJ, Limited w.e.f January 1, 2006.

- Name of NDLC IFIC Bank Limited has been changed to NIB Bank Limited w.e.f November 27, 2005.
- Name of Muslim Commercial Bank has been changed to MCB Bank Limited w.e.f August 1, 2005.
- Name of Bolan Bank Limited has been changed to Mybank Limited w.e.f July 4, 2005.
- Name of Allied Bank of Pakistan Limited has been changed to Allied Bank Limited w.e.f March 28, 2005.

Banking Sector - HY06 Financial Performance

The banking sector has continued to impress market participants by posting double digit year-on-year growth in earnings. Cumulative profit after tax (PAT) of 21 listed banks during the first half of 2006 was reported at Rs31192 million compared to Rs18499 million reported during the corresponding period of last year, registering an increase of 69% (YoY).

Source: Quartely Reports

An interesting observation worth pointing out here is that many banking institutions had posted a quarter-on-quarter decline in earnings during the first quarter of 2006. This may be attributable to the ongoing practice of numerous economic agents who aggressively try to attract more deposits (and also increase disbursements) as the year end approaches in order to meet their targets. In doing so, the institutions might have offered higher than usual rates on deposits with its impact being felt in the financial results of first quarter ended March 06. This phenomena can be substantiated by observing the trend in weighted average spreads which had bottomed out in December '05 (6.98%) and since then have gradually picked up and remained within the range of 7.00% - 7.50%.

Overall, the observed deceleration in bottomline growth is primarily attributable to the high base effect and more importantly due to the increasing cost of funds. Weighted average deposit rates have increased from 2.06% in July '05 to 2.86% by the end of July '06. Consequently, average spreads for the banking sector reduced to 7.04% in June '06 after peaking at 7.43% in October '05. The effect of higher cost of funds is more pronounced on medium and small sized banks.

The graph above shows that although average real (net of inflation) deposit rates still lie in the negative zone, they have reduced to -4.76% in Jun '06 from -6.89% reported during the same period last year.

Total banking deposits grew to Rs 2,166 billion, up by 4.70% (Rs 125bn) during the six months of 2006 while advances during the same period have increased by 4.08% (Rs 83billion). This translates into an advance to deposit ratio of 71% (as of Jun '06) compared to 72% (as of Dec '05). Robust credit appetite shown by the private sector during the last couple of years has caused the sector ADR ratio surge to record high levels which alongside SBP's latest increase in the cumulative SLR & CRR requirements from 20% to 25% has made the environment extremely challenging for the banks. Therefore, there is growing pressure on banks (particularly the medium and small sized) to improve rates in order to mobilize more deposits.

Despite massive credit off-take to the private sector and robust growth in consumer loans (12.4% of total loans in Dec '05, 9.4% in 2004) during the last couple of years, the NPL ratio does not present an alarming situation. Net NPLs to Net Loans for commercial banks have stayed constant at 1.4% as of June '06 compared to 13%+ in 1999. The latest amendments to the Prudential Regulations with regard to the provisioning of NPLs have allowed more transparent reporting of infected loans by the banking sector.

Earnings Decline

Market Analysis

The KSE-100 Index declined by 434 points or 4.1% during August 2006 to close at 10,063. The average daily turnover during August 2006 was 178.1m shares compared to 207.3m shares during July 2006. The market was volatile throughout the month because of minor political uncertainty pertaining to the Supreme Court of Pakistan's judgment on the Pakistan Steel Mill privatization.

The market rallied during the first week of August on the back of good results of companies such as PSO, Shell Pakistan and UBL, which were above expectations. Also, the Minister of Privatization's statement regarding the possibility of issuing OGDC's GDRs by the end of September added support to the rally. The KSE-100 Index increased by 349 points or 3.3% to 10,846 on August 7 and the average daily turnover was about 243m shares.

The market was in a bearish patch during the next 18 days of the month as the Index shed 1,262 points or nearly 12% from August 7 to August 25 to 9,584 and the average daily turnover during this period dipped to 153m shares. The key factors behind this bearish patch are as follows:

 The market was technically overbought which led to both profit taking and weak holder selling in large cap scrips such as OGDC, PTCL, PPL and UBL.

- The release of the detailed judgment of the Supreme Court of Pakistan regarding the Pakistan Steel Mill sell-off as the apex court ruled that the decisions of the Cabinet Committee on Privatization depicted disregard of mandatory rules and also material which was essential for arriving at a fair price for the unit. The political fallout of the detailed judgment led to a no-trust motion tabled by the opposition parties on August 23.
- Declining international oil prices from around US\$78 a barrel to around US\$70 led to selling pressure in petroleum stocks in the local bourses. Also, the well head gas revisions by Ogra for the next 6 months starting July 1, 2006 were minor with

Qadirpur field's pricing dropping by 30.5% which led to additional selling pressure in E&P stocks which comprise around 30-35% of total market capitalization.

Despite the unrest in Balochistan from the killing of Akbar Bugti in a military operation, the market began to recover in the dying days of the month. The Index during the last 4 days gained 479 points of around 5% on improved average daily turnover of 178m shares. The main reason for this rebound can be attributed to a combination of factors such as the market being technically oversold, domestic institutional support in major stocks, foreign buying of around US\$5m and the defeat of the no-trust motion against the Prime Minister on August 29.

Despite strong corporate results with most companies meeting market expectations, a phenomenon of subdued market response has started to emerge recently. In the coming month, annual and half yearly results from cement and textile sectors may result in some activity in the respective sectors; however this will only affect the index marginally. The extension in phasing out of CFS until December 31, 2006 could lead to minor uncertainty as long as restraint is exercised in issuing ad hoc notices before the finalization of rules. With fewer triggers expected to move the market, we feel that the Index will trade in a tight band during the next month. However, our assessment could change significantly if the OGDC GDR pricing is announced in the immediate term. It is fair to say that the privatization play is over for the moment and now close attention will be paid to fundamental strengths of these units such as PSO, PPL and OGDC. We advise investors to gradually accumulate on dips large cap stocks such as NBP, MCB, OGDC and POL. Currently, the market PEx based on FY06A/E earnings is 8.9 while the FY07 forward PEx comes to 8.1. Our sustainable market PEx is 10.6, indicating a potential 12 month upside of 27% or 2,800 points based on FY07F earnings.
