PRESS RELEASE

**History in the Making
NBP migrates to new State-of-the-Art Automation**

'Today is a great day in the history of banking in Pakistan as the Avari Towers Branch of NBP has launched its core banking application software which is a milestone in itself. NBP has taken giant leap to go forward technologically. The Bank is trying to go beyond the imaginations of other competitors in the market by adopting the most comprehensive set of Core Banking Applications for the benefit of our customers. In last 10 years we have been the recipients of numerous awards but today we are facing the biggest challenge of installing this application at different branches of the Bank. This new platform will change the way the bank is working today. This occasion is the culmination of dreams and vision, which is the first step in the transformation of National Bank,'said Syed Ali Raza at the launching ceremony of Core Banking Application at the Avari Towers Branch. The project was initiated in the midst of last year and the project will impact everyone whoever is associated with NBP. The software is developed to perform core operations of banking like recordings of transactions, maintenance, interest calculation, customer records, payments and withdrawals. While the committees like CFT, CPIC and ITBC have made it possible for this dream to come true.

Yours Sincerely,

Fateh M. Shahab Kazi
